

Many people use google everyday for different purposes and they may ask themselves if google is making them dumb.I think google does make you dumb.Google has impact us but in reality is is not helping us much since when we want to know some thing we just google it and write it done and we're done.We don't even check if the information is accurate and that is a way google is making us dumb.I think it does make you dumb for the three reasons which are how we have lost our ability to think deeply,we get distracted ,and it is making us shallow.

The first reason reason why I think google is making us dumb,is that we have lost that our ability to think deeply.According to source A we only think deeply when we are calm and attentive .In other words means we only think when we are focused on what we are doing and can concentrate also.Also what makes us intelligent is our ability to think clearly and with a simple click the internet has everything we would want to know according to Source C.With google our need to memorize is lost and my argument is that

this makes us even more dumb because we can't even think anymore with all this new technology. This is a way that google is making us stupid.

Another way google is making us dumb is that it is a distraction to us. Google and the internet in general can get us distracted easily. Also Source A states that we end up scattered brained and that is why we are always googling, texting, and even surfing. Turning off your computer or phone off is a good way to help you start thinking because google is not the way to intelligence according to source A because it takes thinking rather than clicking your way to "intelligence". This is one way google makes us dumb.

The third way google makes us dumb is we are becoming very shallow. According to source Google makes a lot of money by the way that they show us more. All though google is giving us a lot of useful information it is also encouraging us to think superficially according to source A. Source States that 90% of people suffer from digital amnesia, 70% or more don't know their children's phone number by heart, and 49% have not memorized their partners number which has been caused by internet and google according to document B. Also source B states that there is an argument that people are not dumb because of internet which to men is

ironic because google helps us in many ways but it doesn't let think occur in the brain and that is why this is a reason why google is making us dumb.

In conclusion,Google is making us dumb for the three reasons which are we have lost our ability to think deeply,we get distracted,and it is making us very shallow.Google has an imapct on us which is good/bad like if we are stuck on a math problemwe simply google it and simply get the answer in less than a minute .And that is why I think google is making us dumb.
